| Preface .....   | 11 |
| <b>Chapter 1. The Abstract Model of Computing</b> .....       | 13 |
| 1.1. Introduction .....                                       | 15 |
| 1.2. Using Memory Hierarchies to Reduce Access Time.....      | 16 |
| 1.3. The Computer Hardware as a System .....                  | 18 |
| 1.3.1. CPU.....   | 18 |
| CISC versus RISC .....  | 20 |
| 1.3.2. Storage.....   | 21 |
| Storage Trends.....   | 24 |
| 1.3.3. Memory Subsystem, RAM (Random Access Memory) .....     | 24 |
| 1.3.4. Video Functionality, Concepts and Technology.....      | 26 |
| Graphics Accelerator Cards .....                              | 27 |
| Graphics Driver Software .....                                | 28 |
| Video Trends .....  | 29 |
| 1.4. The BUS .....  | 29 |
| Internal versus External BUS Functionality and Concepts ..... | 29 |
| Bus Width and Clock Speed.....                                | 29 |
| Bus Technology Standards .....                                | 32 |
| Bus Trends.....   | 33 |
| <b>Chapter 2. I/O Devices</b> .....                           | 35 |
| 2.1. Input/Output Function .....                              | 37 |
| 2.2. Organization of the I/O function .....                   | 39 |
| 2.2.1 Programmed I/O .....                                    | 39 |
| 2.2.2 Interrupt-Driven I/O.....                               | 40 |
| 2.2.3 Direct Memory Access (DMA) .....                        | 41 |
| 2.2.4 The Evolution of the I/O Function.....                  | 42 |
| 2.2.5 Design Objectives .....                                 | 42 |
| 2.3. Logical Structure of the I/O Function.....               | 43 |
| 2.4. I/O Buffering .....                                      | 44 |
| 2.4.1. Single Buffer.....                                     | 45 |
| Block-oriented devices .....                                  | 45 |
| Stream-oriented I/O .....                                     | 46 |
| 2.4.2. Double Buffer .....                                    | 46 |
| 2.4.3. Circular Buffer.....                                   | 47 |
| 2.5. Disk Scheduling.....                                     | 47 |
| 2.5.1. Disk Performance Parameters.....                       | 47 |
| 2.5.2. Disk Scheduling Policies .....                         | 49 |
| 2.6. RAID .....   | 50 |
| 2.6.1. RAID Level 0 .....                                     | 51 |
| RAID 0 for High Data Transfer Capacity.....                   | 52 |

|  |           |
|--|-----------|
| RAID 0 for High I/O Request Rate .....                   | 52        |
| 2.6.2. RAID Level 1 .....                                | 53        |
| 2.6.3. RAID Level 2 .....                                | 53        |
| 2.6.4. RAID Level 3 .....                                | 54        |
| 2.6.5. RAID Level 4 .....                                | 55        |
| 2.6.6. RAID Level 5 .....                                | 55        |
| 2.6.7. RAID Level 6 .....                                | 56        |
| 2.6.8. Arrays with multiple RAID technologies .....      | 56        |
| 2.7. Disk Cache .....                                    | 57        |
| Design Consideration.....                                | 57        |
| Performance Considerations .....                         | 59        |
| 2.8. UNIX SVR 4 I/O .....                                | 59        |
| Buffer Cache .....                                       | 59        |
| Character Queue .....                                    | 60        |
| Unbuffered I/O.....                                      | 61        |
| UNIX Devices.....  | 61        |
| <br>   |           |
| <b>Chapter 3. Operating Systems (OS) .....</b>           | <b>63</b> |
| 3.1. Introduction to Operating System .....              | 65        |
| 3.2. Operating System Strategies.....                    | 67        |
| 3.2.1. Batch processing systems .....                    | 67        |
| 3.2.2. Time-Sharing Systems (T-S) .....                  | 68        |
| 3.3. Personal Computer and Workstations .....            | 69        |
| 3.3. Process Control and Real-Time Systems.....          | 69        |
| 3.4. Networks .....                                      | 70        |
| 3.5. Modern Operating Systems .....                      | 71        |
| 3.5.1. The Genesis of Modern Operating System (OS) ..... | 71        |
| 3.5.2. Operating System Objectives and Functions .....   | 72        |
| 3.5.3. The OS as an User/Computer Interface .....        | 72        |
| 3.5.4. The Operating System as a Resource Manager .....  | 73        |
| 3.5.5. The Evolution of Operating Systems .....          | 74        |
| 3.5.6. System Structure .....                            | 75        |
| 3.5.7. Characterization of Modern Operating Systems..... | 78        |
| Micro kernel architecture.....                           | 79        |
| Multithreading .....                                     | 79        |
| Symmetric Multiprocessing (SMP) .....                    | 79        |
| Distributed operating system .....                       | 80        |
| Object-oriented design.....                              | 80        |
| <br>   |           |
| <b>Chapter 4. Software Organization .....</b>            | <b>81</b> |
| 4.1. OS Functions .....                                  | 83        |
| 4.2. General Organizational Issues .....                 | 85        |
| 4.3. Monolithic Organization .....                       | 86        |
| The Traditional UNIX Kernel.....                         | 86        |
| 4.4. Modular Organization .....                          | 89        |
| Choices: An Object – Oriented OS.....                    | 90        |

---

|  |            |
|--|------------|
| 4.5. Extensible Nucleus, or Micro Kernel, Organization ..... | 91         |
| The Mach Operating System .....                              | 92         |
| The CHORUS Operating System .....                            | 94         |
| 4.6. Layered Organization .....                              | 96         |
| OS THE.....  | 97         |
| <br>   |            |
| <b>Chapter 5. Memory Management .....</b>                    | <b>99</b>  |
| 5.1. Generalities.....                                       | 101        |
| 5.2. Mapping the Address Space to Prime Memory.....          | 101        |
| Compile time.....  | 102        |
| Link Time .....  | 102        |
| Load Time.....   | 102        |
| 5.3. Dynamic Memory for Data Structures .....                | 102        |
| 5.4. Memory allocation.....                                  | 103        |
| 5.4.1. Fixed-Partition Memory Strategies.....                | 104        |
| 5.4.2. Variable-partition Memory Strategies .....            | 105        |
| The Basic Strategy .....                                     | 105        |
| Dynamic Allocation.....                                      | 106        |
| Dynamic Address Relocation .....                             | 109        |
| 5.5. Memory Manager Strategies .....                         | 112        |
| 5.5.1. Swapping .....  | 112        |
| 5.5.2. Virtual Memory .....                                  | 114        |
| 5.6. Shared-memory. Multiprocessors.....                     | 115        |
| 5.7. Using Cache Memory.....                                 | 116        |
| Cache Principles .....                                       | 117        |
| Cache and Main Memory.....                                   | 117        |
| Cache implementation strategy.....                           | 119        |
| <br>   |            |
| <b>Chapter 6. Virtual Memory (VM).....</b>                   | <b>121</b> |
| 6.1. Definition of Virtual Memory .....                      | 123        |
| 6.2. Address Space Mapping .....                             | 125        |
| 6.3. Implementing Virtual Memory.....                        | 126        |
| 6.4. Paging.....   | 127        |
| 6.4.1. Virtual Address Translation.....                      | 128        |
| 6.4.2. Static Paging Algorithms .....                        | 130        |
| The Fetch Policy .....                                       | 131        |
| Demand Paging Algorithms .....                               | 131        |
| Random Replacement.....                                      | 132        |
| Belady's Optimal Algorithms.....                             | 132        |
| Least Recently Used (LRU) .....                              | 133        |
| Least Frequently Used (LFU) .....                            | 134        |
| First-In, First-Out.....                                     | 134        |
| Stack Algorithms .....                                       | 135        |
| 6.4.3. Dynamic Paging Algorithms .....                       | 136        |
| The Working Set Algorithm .....                              | 136        |
| Clock algorithm .....  | 138        |

|   |            |
|---|------------|
| Taking Advantage of Pages with IPC.....                             | 138        |
| 6.5. Windows 2000 (Win2k) Virtual Memory .....                      | 139        |
| 6.6. Segmentation .....   | 140        |
| 6.6.1. Address Translation .....                                    | 140        |
| 6.6.2. Implementations .....  | 142        |
| <b>Chapter 7. Process Description, Control and Management .....</b> | <b>145</b> |
| 7.1. The process concept .....                                      | 147        |
| 7.2. Process Management – an introduction .....                     | 150        |
| 7.3. The Creation and Termination of Processes.....                 | 154        |
| 7.3.1. Creation of Process .....                                    | 154        |
| 7.3.2. Termination of Process .....                                 | 155        |
| 7.3.3. Process state transitions .....                              | 156        |
| 7.4. Process Description .....                                      | 159        |
| 7.4.1. Operating-System Control Structures .....                    | 160        |
| 7.4.2. Process Control Structures.....                              | 161        |
| Process Location.....   | 161        |
| Process Attributes .....  | 162        |
| The Role of the Process Control Block.....                          | 164        |
| Process Control - Modes of execution.....                           | 165        |
| <b>Chapter 8. Scheduling .....</b>                                  | <b>167</b> |
| 8.1. Types of Processor Scheduling .....                            | 169        |
| 8.1.1. Long-Term Scheduling.....                                    | 171        |
| 8.1.2. Medium-Term Scheduling.....                                  | 173        |
| 8.1.3. Short –Term Scheduling .....                                 | 173        |
| 8.2. Scheduling Algorithms.....                                     | 173        |
| 8.2.1. The Use of Priorities .....                                  | 174        |
| 8.2.2. Alternative Scheduling Policies.....                         | 176        |
| First-Come-First-Served (FCFS).....                                 | 177        |
| Round Robin.....  | 177        |
| Shortest Process Next (SPN) .....                                   | 179        |
| Shortest Remaining Time (SRT) .....                                 | 181        |
| Highest Response Ratio Next .....                                   | 181        |
| Feedback .....  | 181        |
| 8.3. Performance Comparison .....                                   | 183        |
| 8.3.1. Queuing Analysis.....  | 183        |
| 8.3.2. Simulation Modeling .....                                    | 184        |
| 8.4. Fair-Share Scheduling .....                                    | 184        |
| 8.5. Traditional UNIX Scheduling .....                              | 186        |

---

|   |     |
|---|-----|
| <b>Chapter 9. UNIX Operating System</b> .....                         | 187 |
| 9.1. History .....  | 189 |
| 9.2. Description of the general architecture.....                     | 190 |
| 9.2.1. The Traditional UNIX Kernel.....                               | 191 |
| 9.2.2. Process States.....  | 194 |
| 9.2.3. Process Description and control .....                          | 195 |
| Process Control .....   | 197 |
| The u Area and proc Structure .....                                   | 198 |
| 9.2.5. Process Context .....  | 199 |
| 9.3. Introduction to UNIX Shell .....                                 | 201 |
| 9.3.1. The Tree Major Shells .....                                    | 202 |
| 9.3.2. History of Shell.....  | 203 |
| 9.3.3. Uses of the Shell .....  | 203 |
| 9.4. System Startup and the Login Shell .....                         | 204 |
| 9.5. Parsing the Command Line .....                                   | 205 |
| 9.6. Types of commands.....   | 206 |
| 9.6.1. Processes and the Shell.....                                   | 207 |
| 9.6.2. System Calls .....   | 207 |
| The fork system call .....  | 207 |
| The wait system call.....   | 207 |
| The exec system call .....  | 208 |
| The exit System call.....   | 208 |
| 9.7. The system view of processes and resources.....                  | 209 |
| 9.7.1. Implementing the Process Model .....                           | 209 |
| 9.7.2. Implementing the Resource Model.....                           | 210 |
| 9.7.3. Initializing the Operating System .....                        | 211 |
| 9.7.4. Process Address Space.....                                     | 212 |
| 9.8. The Unix Tool Box.....   | 216 |
| 9.8.1. The Streamlined Editor (SED).....                              | 216 |
| Sed Scripting .....   | 217 |
| 9.8.2. AWK as a UNIX Tool .....                                       | 217 |
| AWK Command in a Script File .....                                    | 217 |
| Interacting with the Shell.....                                       | 217 |

| <b>Chapter 10. Application Software</b> .....                         | 219 |
| 10.1. Definition and categories .....                                 | 221 |
| 10.2. Office Automation.....  | 222 |
| Definition .....  | 222 |
| Appliance Domains.....  | 223 |
| The Position of Office Automation Inside the Information System ..... | 223 |
| 10.3. Documents.....  | 227 |
| 10.3.1. Designing documents .....                                     | 228 |
| 10.3.2. Working with pages .....                                      | 228 |
| 10.3.3. Type and Fonts .....  | 231 |
| 10.4. Principles of document design.....                              | 233 |
| 10.5. Word.....   | 236 |
| 10.5.1. WinWord Startup Switches.....                                 | 238 |

|   |            |
|---|------------|
| 10.5.2. Working with pages .....                  | 240        |
| 10.5.3. Blocks.....                               | 241        |
| 10.5.4. Cut/Copy/Paste .....                      | 242        |
| 10.5.5. Using colors .....                        | 243        |
| 10.5.6. Footnote/Endnote .....                    | 243        |
| 10.5.7. Headers and Footers .....                 | 244        |
| 10.5.8. Index and Tables .....                    | 244        |
| 10.5.9. Spacing.....                              | 244        |
| 10.5.10. Using Fonts in your documents.....       | 245        |
| 10.5.11. Drawing, Resizing and Moving Frames..... | 246        |
| 10.5.12. Anchors & Captions.....                  | 248        |
| 10.5.13. Graphics and diagrams .....              | 248        |
| 10.5.14. Tables .....                             | 250        |
| Creating a table .....                            | 252        |
| Operations on cells:.....                         | 252        |
| Using Sum function and cell ranges.....           | 253        |
| Working with formula in tables .....              | 253        |
| Arithmetic Formula in tables .....                | 254        |
| Built-in functions .....                          | 254        |
| Changing table properties .....                   | 255        |
| 10.5.15. Working with fields.....                 | 255        |
| Fields.....                                       | 255        |
| Character formatting in fields .....              | 257        |
| Using macros with fields.....                     | 257        |
| An Example of using Formulas in tables .....      | 264        |
| 10.5.16. Macros.....                              | 265        |
| 10.5.17. Defining and viewing bookmarks .....     | 266        |
| 10.5.18. Indexes .....                            | 269        |
| 10.5.19. Table of contents .....                  | 269        |
| Compiling table of contents .....                 | 269        |
| Updating table of contents .....                  | 270        |
| 10.5.20. Tables of figures.....                   | 270        |
| 10.5.21. Tables of authorities .....              | 270        |
| 10.5.22. Electronic mail .....                    | 270        |
| 10.5.23. Mail Merge.....                          | 271        |
| 10.5.24. Printing labels on envelopes.....        | 272        |
| <b>Bibliography.....</b>                          | <b>275</b> |
